

Fluxa MVP - Implementation Roadmap

Detailed status report of completed modules and upcoming milestones for the workflow automation platform.

Core Phase	Status	Completion %
Phase 1: Foundation (Config, DB, Health)	COMPLETED	100%
Phase 2: Core Data Models (User, Org, Workflow, Exec)	COMPLETED	100%
Phase 3: Simple Workflow Node (Set Variable)	COMPLETED	100%
Phase 4: Execution Engine (Temporal Orchestration)	COMPLETED	100%
Phase 5: User Interface (Frontend Canvas & Logs)	PENDING	0%
Phase 6: Integrations Library (AI, HTTP, Logic)	PENDING	10%
Phase 7: Webhooks & Schedule Triggers	PENDING	0%
Phase 8: Security & Credentials Storage	PENDING	0%

Completed Milestones ([X] Done)

Module	Implementation Details
Project Config	Centralized configuration with Pydantic settings loading from env vars.
Database Setup	MongoDB connection + Beanie ODM schemas defined for User, Org, Workflow, WorkflowVersion, Execution, NodeExecution.
Health API	Simple health check endpoint returning system status.
Orchestrator	Shifted from ARQ to Temporal Workflow Orchestrator supporting pause/resume/cancel signals.
Temporal Worker	Worker script executing load_execution_context and execute_node activities.
Demo Node	Set Variable node executor built and registered in NodeExecutorRegistry.

Upcoming Implementation Tasks ([] Todo)

Task Name	Scope & Requirements	Phase
Frontend Workspace Setup	Initialize Next.js/Vite project for the web interface.	Frontend
Visual Workflow Canvas	Integrate React Flow to drag and drop nodes, connect edges, and export JSON definitions.	Frontend
Run History & Logs UI	Real-time execution dashboard showing node status list from MongoDB.	Frontend
HTTP Request Node	Create HTTP client node to trigger external API calls (GET, POST, headers, payload).	Nodes Library
AI / LLM Node	Integrate Gemini / OpenAI model nodes for intelligent text processing.	Nodes Library
Logic Nodes (If/Else)	Implement conditional branch parsing in Temporal orchestrator workflow.	Nodes Library
Webhook Trigger Endpoint	Expose dynamic endpoint `/api/v1/webhooks/{wf_id}` to start a workflow on external events.	Triggers
Cron / Schedule Trigger	Use Temporal cron or APScheduler to fire manual execution API on schedule.	Triggers
Secure Vault Storage	Encryption service using cryptography (Fernet) to store external keys (Slack, Google tokens).	Security
