

Fluxa MVP - Implementation Roadmap

Detailed status report of completed modules and upcoming milestones for the workflow automation platform.

Core Phase	Status	Completion %
Phase 1: Foundation (Config, DB, Health)	COMPLETED	100%
Phase 2: Core Data Models (User, Org, Workflow, Exec)	COMPLETED	100%
Phase 3: Simple Workflow Node (Set Variable)	COMPLETED	100%
Phase 4: Execution Engine (Temporal Orchestration)	COMPLETED	100%
Phase 5: User Interface (Frontend Canvas & Logs)	COMPLETED	100%
Phase 6: Integrations Library (AI, HTTP, Logic)	COMPLETED	100%
Phase 7: Webhooks & Schedule Triggers	PENDING	20%
Phase 8: Security & Credentials Storage	COMPLETED	100%

Completed Milestones ([X] Done)

Module	Implementation Details
Project Config	Centralized configuration with Pydantic settings loading from env vars.
Database Setup	MongoDB connection + Beanie ODM schemas defined for User, Org, Workflow, WorkflowVersion, Execution, NodeExecution.
Health API	Simple health check endpoint returning system status.
Orchestrator	Shifted from ARQ to Temporal Workflow Orchestrator supporting pause/resume/cancel signals.
Temporal Worker	Worker script executing load_execution_context and execute_node activities.
Demo Node	Set Variable node executor built and registered in NodeExecutorRegistry.
Visual Workspace	React Flow visual builder, node palettes, schema-driven properties configuration panel.

Execution Dashboard	Live simulation logger tracking node execution history status, durations, and output payloads.
Skeuomorphic Theme	Cyber-Skeuomorphic layout design with 3D hardware corner screws, glowing animated neon cables, and tactile switches.
Integrations	Built plugins and schema configurations for HTTP Request and AI Agent (Gemini) nodes.

Upcoming Implementation Tasks ([] Todo)

Task Name	Scope & Requirements	Phase
Webhook Trigger Endpoint	Expose dynamic endpoint `/api/v1/webhooks/{wf_id}` to start a workflow on external events.	Triggers
Cron / Schedule Trigger	Use Temporal cron or APScheduler to fire manual execution API on schedule.	Triggers
Logic Nodes (If/Else)	Implement conditional branch parsing in Temporal orchestrator workflow.	Nodes Library
